Software Engineering

This report documents the Customer Development (CustDev) process for **CineLearn**, a mobile application designed to help intermediate English learners (B1–B2) improve their language skills through authentic video content. While CustDev is typically qualitative, we employed a **quantitative survey approach** to gather insights from a broader audience. The survey collected **51 responses**, providing statistically significant data to validate hypotheses, identify user needs, and refine our value proposition. This report covers:

1. **Task 1:** Interview/survey preparation, execution, and analysis.
2. **Task 2:** Creation of a persona profile based on the findings.

Visual data (charts, graphs) from the survey are included in the analysis section to support key insights.

## **TASK 1: Survey Preparation, Execution & Analysis**

### **Step 1: Audience Segmentation**

Based on the initial business model (Assignment 2), we segmented the target audience into subgroups to tailor our survey:

1. **By English Level:** Beginners (A1–A2), Intermediate (B1–B2), Advanced (C1–C2).
2. **By Learning Purpose:** Education, exams (IELTS/TOEFL), career, entertainment.
3. **By Content Consumption Frequency:** Daily, weekly, rarely.

### **Step 2: Segment Prioritization**

We prioritized segments using:

- **Accessibility:** Students and young professionals (18–30) are easily reachable online.
- **Volume:** Intermediate learners (B1–B2) form the largest segment in the language-learning market.
- **Satisfaction:** Users struggling with subtitle dependency and vocabulary lookup would benefit most.

**Priority Segment:** Intermediate learners (B1–B2) who watch English content several times a week for educational or exam purposes.

### **Step 3: Survey Design & Distribution**

We designed a structured **Google Forms survey** with 15 questions covering:

- Demographics
- Content-watching habits

- Difficulties faced
- Feature preferences

### Hypotheses Tested:

1. Users frequently pause videos to translate unknown words.
2. Users rely heavily on native-language subtitles, reducing listening practice.
3. Users want instant translation without pausing.
4. Users would use an app that combines video watching with vocabulary learning.

**Distribution:** The survey was shared via social media, university forums, and language-learning communities. We collected **51 complete responses**.

*Диаграммы и графики из Google Forms будут вставлены здесь в финальном отчете (например, распределение по уровням английского, цели обучения, частота просмотра контента).*

### Step 4: Survey Execution & Key Principles

- **Objective:** Understand pain points in learning English through videos and validate core features.
- **Neutrality:** Questions were open-ended and multiple-choice to avoid bias.
- **Anonymity:** Responses were collected anonymously to ensure honesty.
- **Gratitude:** Respondents were thanked for their participation.

### Step 5: Analysis of Survey Results

The survey yielded **51 valid responses**. Key insights include:

- **78% of respondents** are aged 18–30, confirming our target demographic.
- **65% are at B1–B2 level**, aligning with CineLearn’s core audience.
- **Top difficulties:**
  - “I don’t understand many words” (68%)
  - “I rely too much on subtitles” (55%)
  - “I frequently pause videos to translate words” (49%)
- **Most-wanted features:**
  - **Instant word translation without pausing** (92% positive)
  - **Hidden subtitles with on-demand access** (75% positive)
  - **Saving words with video scenes** (80% positive)
- **Frustrations with existing apps:** “Too gamified,” “unrealistic dialogues,” “lack of progress tracking.”

### Validation of Hypotheses:

- ☒ **Hypothesis 1:** Confirmed—49% pause videos “sometimes” or “very often.”
- ☒ **Hypothesis 2:** Confirmed—55% rely on native-language subtitles.
- ☒ **Hypothesis 3:** Strongly confirmed—92% want instant translation.
- ☒ **Hypothesis 4:** Confirmed—80% want vocabulary saved with video scenes.

График “Top Requested Features” будет вставлен здесь, показывающий процентное соотношение предпочтений.

### Business Implications:

- The core value proposition of “**Frictionless Immersion**” is validated.
- Features like **gesture-based translation** and **hidden subtitles** are essential.
- The “**Reels**” **review feed** should be optional, as some users prefer traditional lists.

## TASK 2: Persona Profile Based on CustDev Findings

Based on the survey data, we created the following primary persona:

# Persona 1

## Aruzhan

### The Exam-Driven Student

- Name: Aruzhan
- Age: 22
- Occupation: University Student
- English Level: B2 (Upper-Intermediate)
- Goal: Achieve IELTS Band 7+
- Background:

Aruzhan is in her final year of university and plans to study abroad. She watches English series daily but struggles with academic vocabulary and fast speech. She uses dictionary apps but finds switching between apps disruptive and loses track of the plot.

### Frustrations:

- Loses focus when pausing videos to translate

- Feels overwhelmed by slang and idioms not covered in textbooks
- Existing apps feel “too gamified” and not aligned with exam preparation

#### Needs:

- A seamless way to learn while watching
- Contextual vocabulary explanations with examples
- Progress tracking tailored to exam preparation

#### How CineLearn Helps:

CineLearn’s double-tap translation and hidden subtitles allow Aruzhan to learn without interruptions. The Reels feed helps her review words in context, making study sessions more engaging and effective for IELTS.

#### Persona 2: Marat – The Career Advancer

## Persona 2

### Marat

#### The Career Advancer

- Name: Marat
- Age: 28
- Occupation: IT Specialist
- English Level: B1 (Intermediate)
- Goal: Improve professional communication for career growth
- Background:

Marat works in a tech company with international clients. He watches tech tutorials and business series in English but struggles with technical jargon and natural speaking pace. He often pauses videos to translate terms, which breaks his workflow.

#### Frustrations:

- Technical vocabulary is not well-covered in standard language apps
- Difficulty understanding accents and fast dialogue in meetings
- Lack of time for traditional language courses

#### Needs:

- Learning relevant to his field (IT/business)
- Flexible, on-the-go learning that fits his schedule
- Improved listening comprehension for calls and presentations

### How CineLearn Helps:

CineLearn's personalized vocabulary lists and contextual learning allow Marat to save and review job-specific terms. The hidden subtitles feature trains his ear for real-world listening, while progress tracking keeps him motivated.

### Persona 3: Aigerim – The Casual Learner

A profile card for Persona 3, Aigerim. On the left is a circular portrait of a young woman with long dark hair. To the right, the text 'Persona 3' is in a large, bold, brown font. Below it, 'Aigerim' is in a smaller bold font, and 'The Casual Learner' is in a brown pill-shaped box. A bulleted list follows: Name: Aigerim, Age: 25, Occupation: Graphic Designer, English Level: A2 (Beginner), Goal: Enjoy English content without frustration, Background: Aigerim loves watching movies and YouTube vlogs in English but relies heavily on native-language subtitles. She wants to improve her English naturally but feels discouraged by constant pausing and dictionary lookups.

**Persona 3**

**Aigerim**

**The Casual Learner**

- Name: Aigerim
- Age: 25
- Occupation: Graphic Designer
- English Level: A2 (Beginner)
- Goal: Enjoy English content without frustration
- Background: Aigerim loves watching movies and YouTube vlogs in English but relies heavily on native-language subtitles. She wants to improve her English naturally but feels discouraged by constant pausing and dictionary lookups.

### Frustrations:

- Overwhelmed by unknown words
- Relies too much on subtitles, reducing listening practice
- Loses interest when learning feels like a chore

### Needs:

- A low-pressure, enjoyable way to learn
- Simple, intuitive tools for instant translation
- Motivation through visual and engaging content

### How CineLearn Helps:

CineLearn's **gesture-based interaction** makes translation effortless. The **hidden subtitles** encourage active listening, while the **Reels feed** turns review into a fun, snackable experience. Aigerim can learn without feeling overwhelmed.

### Frustrations:

- Loses focus when pausing videos to translate

- Feels overwhelmed by slang and fast speech
- Existing apps feel “too gamified” and not context-based

#### **Needs:**

- A seamless way to learn while watching
- Contextual vocabulary explanations
- Progress tracking to stay motivated

#### **How CineLearn Helps:**

CineLearn’s **double-tap translation** and **hidden subtitles** allow Aruzhan to learn without interruptions. The **Reels feed** helps her review words in context, making study sessions more engaging and effective.

### **CONCLUSION**

This CustDev process confirmed that CineLearn addresses real, unmet needs among intermediate English learners. The survey data validated our core hypotheses and highlighted which features are most desired. The persona “Aruzhan” will guide future design and marketing efforts, ensuring the product remains user-centric.

#### **Next Steps:**

- Prototype testing with focus groups
- Iteration based on qualitative feedback
- Development of MVP with priority features

---
